## Mitsubishi EVO8

This Document refers to MoTeC M800 OEM installations to Mitsubishi Lancer Evo8 using the EVO8 adaptor (**MoTeC Part No. 13007A**). For all other applications please refer to the correct installation notes.

## Contents

- Introduction
- Parts Required
- Model Specific Information
- Thematic Fan Operation
- Input / Output Test
- TPS Setup
- Idle Setup
- Mass Air Flow
- Additional Sensors
- M800 Pinout
- OEM ECU Pinout
- Calibration Tables
- ECU Setup
- Link Table
- Communications and Lambda connector

## Introduction

The MoTeC M800 OEM is a MoTeC M800 ECU with an adaptor board that allows it to plug directly into the cars original wiring. ECU functionality is the same as the MoTeC M800 with the exception of peak and hold injector drive function which is not possible on the M800 OEM. Only high impedance injectors or low impedance injectors with a suitable resistor can be used with the M800 OEM. The Mitsubishi Evo8 has a resistor pack installed in the injector circuit with low impedance injectors.

The EVO8 M800 Adaptor is an interface that allows an M800 OEM to be mounted in the factory ECU case for a Mitsubishi Lancer EVO 8 (three plug connector). This document describes the details of the EVO8 adaptor and the configuration options that are available.

There are two versions of the EVO8. One version uses an ECU with a three plug main connector. This vehicle is supported by the EVO8 OEM adaptor. The other version uses an ECU with a four plug main connector which is supported by the EVO48 OEM Adaptor (MoTeC part no. 13009A).

The Motec M800 OEM is supplied as an assembly which consists of the M800 OEM ECU and the adaptor board. The adaptor board is vehicle specific and there are links on the adaptor board to allow for variations in different models and functional requirements of the user. A start file is installed which should be sufficient to start the engine prior to tuning. To ensure that the correct

adaptor board, link setup and start file is provided full details of the vehicle must be quoted when ordering. Details should include the factory ECU part number, year, model and version.

### Important Note!

The M800 OEM has been made to the highest standards and will provide reliable performance but should not be dismantled in any way due to the risk of damage. If the Link setup needs to be changed this should only be done by an authorised MoTeC dealer or someone with suitable equipment and soldering experience.

### Parts Required

MoTeC Part No.	Description	Notes
13007A	ECU M800 OEM EVO8	MoTeC M800 OEM and EVO8 Adaptor board assembly.
61046	OEM-CAN Loom	For PC connection to the ECU. Connects to the Communications connector on the OEM adaptor board to provide an external CAN communications connection.

### Optional

MoTeC Part No.	Description	Notes
61044	OEM to lambda loom	For lambda sensor connection to the Lambda 2 connector on the OEM adaptor board. One end has a connector which connects to the Lambda 2 connection on the OEM Board, the other end is terminated with a 6 pin female DTM connector. Length is 30 cm.
61051	Lambda extension loom	A 2.5 meter extension to connect between the OEM-Lambda loom and a Bosch LSU wideband lambda sensor. One end has a 6 pin male DTM connector to mate to 61044, the other end has a connector for a Bosch LSU wideband lambda sensor. (MoTeC Europe part no.61050 3.0 metre).
28102	M800 Wideband Lambda	ECU upgrade required to control a wideband lambda sensor (free for the first 8 hours of engine running time).
28101	Logging 1 Mb	ECU data logging (free for the first 8 hours of engine running time).
26105	Advanced functions	ECU upgrade to enable the following functions: Over-run boost (ORB), Launch Control, Traction Control, Gear Change Ignition Cut.
28117	Over-run boost	ECU upgrade to enable Over-run boost (ORB) only without other advanced functions.

### Model Specific Information

Some Evo8 variants have 2 boost control valves. The second valve is connected to OEM pin 6 and requires a link wire from pin 41 to pin6 on the OEM adaptor board.

### Thematic Fan operation

The thematic fan relay is wired for high side drive, it is normal operation for the thematic fan to run briefly when the ignition is switched on, when the ECU has been re-set or when the output test menu is open.

## Input / Output Test

It is important to carry out an output test and check that all sensors are working prior to starting the engine. When carrying out an output test the relay for the thematic fans can be removed to stop the fans from running continuously. The relay is located in the relay box to the left of the engine compartment. If outputs are not functioning or sensors are not reading correctly refer to the setup information in the Pinout Diagram.

## TPS Setup

The TPS sensor will need to be moved to correctly set the TP hi and TP lo settings. In the standard position the TPS output voltage will go too high and read approximately 102 (max 99.0). Loosen the TPS retaining screws and open the throttle to wide open. Rotate the sensor until the TP Hi reading is around 98. Tighten the screws and set TP hi and TP lo.

## Idle Setup

To achieve good idle stability and improve the idle stepper control function the idle air bypass needs to be adjusted. This must be done with the engine at operating temperature and all electrical and mechanical loads switched off. The idle air bypass screw is located on the throttle assembly.

- Turn the idle air bypass screw out 3 turns.
- Set the Aim Idle speed (ECU Manager) to 200 RPM (this will cause the stepper motor to close completely).
- Adjust the base idle speed using the idle air by-pass screw. Set the base idle speed to about 50 – 100 RPM lower than the desired aim idle speed.
- Re-set the Aim Idle speed.

## Mass Air Flow

When using MAF for efficiency measurement it is recommended that the Over Fuel Cut off is active to avoid excessively rich mixtures during over-run. The settings in the table below are recommended but can be adjusted to suit the individual application.

Overrun Fuel Cut	
Parameter	Value
Overrun Inactive RPM	1600
Overrun Active RPM	2100
Overrun Throttle position	10
Overrun Recover Fuel	0

## Additional Sensors

It is possible to use un-assigned pins for additional sensors. AV7 and AV8 are available to use as sensor inputs (Analogue Voltage inputs). AT5 or AT6 is available as a spare input (Analogue Temp or switched) depending on Air conditioning installation. There are spare 5v 8v 0v pins which are connected by joining links (refer to M800 Pinout section for details)

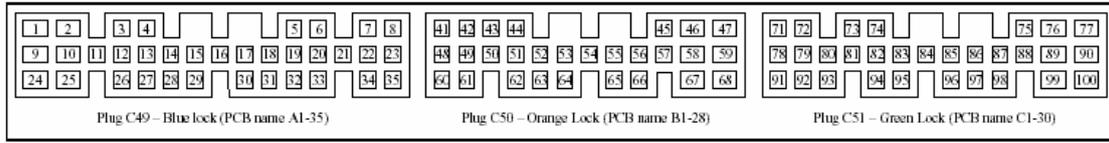

## Using the Pinout Information

There are 2 Pinout sections in this document.

The M800 Pinout describes the function of each M800 pin with a reference to the OEM pin number it is connected to. There is a description of its function and optional function where applicable as well as notes on functional setup or calibration as necessary. Where there is one or more options for the pin the option is marked with a # or ##. The corresponding OEM Pin, function and setup notes refer to the parameters in M800 ECU Manager and are all marked with # or ## with any changes in link setup or vehicle modifications detailed.

The OEM ECU Pinout lists pins in order of the factory connector with corresponding MoTeC M800 pin, functional description and typical wire colour.

## M800 Pinout

M800 Pin	OEM Pin No.	Standard Function	Optional Function	Setup Notes
<b>Power</b>				
12V	47, 59	12v Switched (ECU Relay)		
GND	46, 58	ECU Earth		
8V ENG		8V to TCK Module		
5V ENG	42, #77	5V sensor supply	# Spare 5V to pin 77 for extra sensors	#Join Link22 to connect extra 5V to pin 77
0V ENG	34, 49, #75, #76	0V sensor supply	# Spare 0V to pins 75 & 76 for extra sensors	#Join Link08 to connect extra 0V to pin 75 and 76
8V AUX	#87	8V to internal comms connector	# Spare 8V to pin 87 for extra sensors	#Join Link12 to connect extra 8V to pin 87
5V AUX		5 V to internal barometer		
0V AUX		0V to internal Comms Connector and Internal barometer		
<b>Outputs</b>				
INJ1	1	Injector Cylinder 1		
INJ2	24	Injector Cylinder 3		
INJ3	2	Injector Cylinder 4		
INJ4	9	Injector Cylinder 2		
INJ5	20, #48	A/C Clutch	# Fuel Pressure Regulator Solenoid (manifold pressure port). For fuel pressure against ambient (active) or against manifold (inactive).	<p><b>Function:</b> 104 Air Conditioner Clutch Parameters can be set to switch compressor off at high speed.</p> <p><b>#Optional Function</b> # Cut Link4, Join Link5. An Auxiliary Table can be used to control Fuel pressure Regulator Solenoid connected to pin 48</p>

M800 Pin	OEM Pin No.	Standard Function	Optional Function	Setup Notes
INJ6	35, #56##67	Spray Bar Output (Evo8) #Spray Bar Output (Evo9) on pin 56. Both Pins are connected to INJ6	##Manual spray bar forces spray bars to operate independent of ECU	<b>Function:</b> 114 Spray Bars <b>Parameters:</b> Mode 1 On Value 85 Off Value 80 On Time 2.0 Off Value 7.0 Source 0 MAP (optional) 1 TP 2 Efficiency point 3 Load point 4 Air Temp  Logic Polarity 0 Settings may vary depending on requirements
INJ7	5	2 <sup>nd</sup> Air Solenoid for use with ORB		<b>Function:</b> 115 Status Output <b>Parameters:</b> Selection 31 (ORB) Logic Polarity 0 Output Mode 0 Flash 0 Flash rate 0
INJ8	21	Fuel Pump		<b>Function:</b> 101 Fuel Pump <b>Parameters:</b> Delay 5 Polarity 0 Output Mode 0
IGN1	11	Ignition Cylinder 1&4		
IGN2	12	Ignition Cylinder 2&3		
IGN3	41,#6,	Boost Control	#Some models have 2 <sup>nd</sup> solenoid on pin 6 (Link wire required)	<b>Function:</b> 1 Boost control. <b>Parameters:</b> Frequency 30 Hz <b>#Option</b> # Solder a link wire between pin 41 and pin 6.

M800 Pin	OEM Pin No.	Standard Function	Optional Function	Setup Notes
IGN4	22, 57	22. Driver Warning Light with power hold function. (Uses Engine Check Light)  57. ECU relay (via driver warning) Controlled by the ignition switch via a circuit on the adaptor and M800 output shared with the warning light		<b>Function:</b> 108 Driver Warning Alarm  Parameters: Hold Time 2 Logic Polarity 0 Output Mode 0 Power Hold 1 (minimum)
IGN5	90	ORB Status light (Uses intercooler spray light)		<b>Function:</b> 115 Status Output  Intercooler spray lamp: ON if ORB is enabled, FLASHING if ORB table 2 is selected. Used when DIG4 function is set to 25 (ORB Select)  Parameters Selection 20 Logic Polarity 0 Output Mode 0 Flash 33 Flash rate 2  <b>#Optional Parameters</b> Intercooler Spray lamp ON if table 2 is selected. Used when DIG4 function is set to 24 (ORB Table Select) Selection 33 Logic Polarity 0 Output Mode 0 Flash 0 Flash rate 0
IGN6	45	Tacho Signal		<b>Function:</b> 4 Tacho Output  Parameters Calibration 0
AUX1	18	Thermo Fan	Also switches condenser fan pins 30 & 31 when main fan starts	<b>Function:</b> 102 Thematic Fan  Parameters On Temp 90 Off Temp 80 Time Out 10 Frequency 4000 Polarity 1 Output Mode 0 Min Duty 0

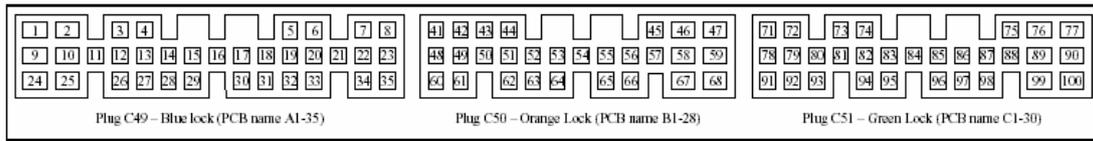

M800 Pin	OEM Pin No.	Standard Function	Optional Function	Setup Notes
AUX2	3, #INT	Lambda heater	#Lambda heater (using internal lambda connector)	<p><b>Function:</b> 9 Lambda Sensor Heater</p> <p>Parameters: Lambda Sensor 2</p> <p><b>#Optional Function</b> Cutting Link18 will disconnect AUX2 from the ECU connector (pin3)</p>
AUX3	19 #79	19 AFM reset	#79 ACD Idle signal.	
AUX4	8, #16	Alternator Control	# Canister purge	<p><b>Function:</b> 113 Alternator Control</p> <p>Parameters Set as required. The alternator can be switched off at full throttle if desired. Use battery voltage and throttle position as table axis and configure so that the alternator is only cut when battery voltage is sufficiently high.</p> <p><b>#Optional Function</b> Join Link2, cut Link1 3 Aux table</p>
AUX5	14	Idle Stepper Motor		<p><b>Function:</b> 8 Stepper Idle Speed Control</p> <p>Parameters; Refer to Idle Control section Uses Aux 6, 7 &amp; 8.</p>
